

Ezy-Track™ UV Weld Path Marker

www.ezy-track.com

A real revolution in Occupational Health & Safety for welders

This latest advance in welding technology significantly reduces the risk of eye damage, sore or strained eyes and headaches for professional welders. Invented by a welder for welders, 'Ezy-Track'™ was designed to enhance the safe working environment of welders, helping them extend their working life. Other benefits include increased productivity and better quality welds. Also ideal as a training aid. A high-tech marker and filter combination for professional quality welds. Internationally patented.

Step 1

Place 'Ezy-Track'™ filter behind #8 shade lens

Step 2

Mark weld site

Step 3

Marking will glow under welding conditions

Improves Health & Safety by:

- Reducing harmful UV light reaching welders' eyes resulting in reduced incidents of sore eyes, eye strain, headaches and long term eye damage
- Extending the welders' welding time
- Improving the safe work environment

Increases Productivity by:

- Highlight borders, stitch welds and no weld zones thus eliminating poor weld finishes, mis-welds, run-offs or the need to grind back
- Improved end product
- Improved efficiency by reducing welders' fatigue
- Cost/time saving

Quality Assurance:

- Marker is x-ray friendly – Complies with Macro Testing requirements OF AS 1554 PT1 SP
- Does not contaminate the weld pool
- Helps reduce weld run-offs, mis-welds and grind backs
- Increases tracking ability on continuous seam work, on vertical down and/or flick position
- Tested and approved by international welding agencies – Internationally Patented

Ideal uses include:

- Light restricted areas, dimly lit workshops & confined spaces
- Accurate stitch welding & marking 'no weld' zones
- General note & symbol marking on work surface
- Invaluable training aid

The overall effect is a "safer, clearer and cleaner" visual aid to reduce eye fatigue, and allow a more accurate placement of the weld
